

LAG3 Inhibitors **(inhibitors, agonists and modulators)**

LAG3, short for Lymphocyte Activation Gene-3, works to suppress an immune response by action to Tregs as well as direct effects on CD8+ T cells.

BMS-986016

Catalog Number:

Molecular Weight:

Molecular Formula:

Description: A monoclonal antibody binds to LAG-3 on tumor infiltrating lymphocytes (TILs), with potential immune checkpoint inhibitory and antineoplastic activities. LAG-3 is a member of the immunoglobulin superfamily (IgSF) and binds to major histocompatibility complex (MHC) class II.

IMP321

Catalog Number:

Molecular Weight:

Molecular Formula:

Description: An antagonist mAb which meaning it blocks the LAG-3-mediated inhibitory signal given to tumor infiltrating T cells. This allows the CD8 T cell to generate a better cytotoxic response against cancer cells.
